

## A Fresh Solution for a Time-poor World

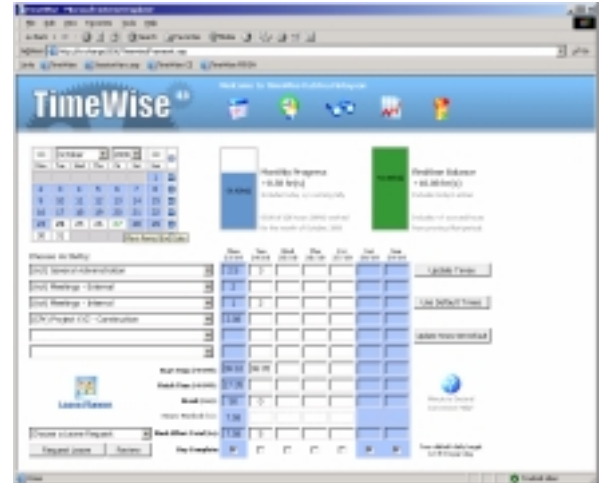

In a time-poor world, TimeWise is an innovative time management application, helping people increase their productivity by understanding where the time goes.

Traditionally, timesheet systems are all take and no give, with little benefit to the end user. A completely new approach to the challenge of time management, the TimeWise design is focused on ease of use and visual feedback.

TimeWise is an enterprise-ready application that integrates timesheet entry, timesheet and leave request approval workflows, leave planning, and productivity analysis, supporting these vital business processes.

Accessed via an organisation's intranet, TimeWise integrates secure web-based access with sound data storage, in a low-maintenance system. Email notification of key workflow events supports inbuilt approval workflows. By supporting people to self-manage the time they spend across individual activities, while maintaining accountability around productivity targets, TimeWise enables a mature workplace culture with maximised staff efficiency.

As software becomes ever more closely aligned with business processes, TimeWise forms an essential part of any strategy for the high-performance workplace, supporting the management of this most valuable resource: people's time.

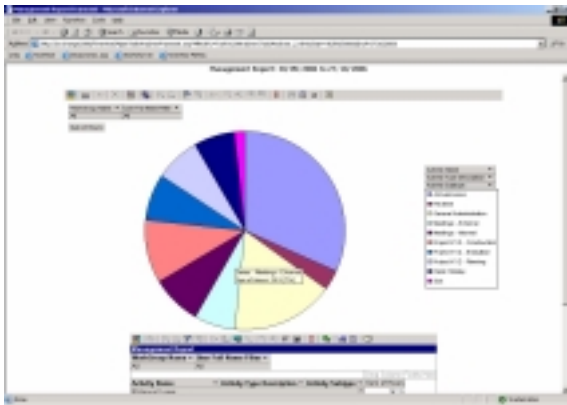

## Value in Key Areas

TimeWise provides real benefits, designed around highly innovative features in three key areas:

1. User-specific visual feedback on time entry assists people to manage their own time.
2. Email workflow around timesheet and leave request approval creates an active time management environment, to reduce management time and communication overheads, and ensure process integrity.
3. Analysis of resources via dynamic reporting enables more informed resource decisions.

Experienced in working with project teams in collaborative environments, Dragonfly Software's designers bring to the TimeWise application a rich understanding of the value of human resource management. Approaching the design from a perspective of many years in production and project management, Dragonfly Software's wealth of experience in these areas has been invested into TimeWise.

## Technology

Platform and key technologies:

- Microsoft Windows Server 2000/2003
- Microsoft SQL Server
- Internet Information Server
- Microsoft Office
- Microsoft Office Web Components
- Active Server Pages
- ADO/CDOSYS
- ODBC

For more information on this system, contact Dragonfly Software on +61 8 8410 8889 or email us at [info@dragonflysoftware.com.au](mailto:info@dragonflysoftware.com.au).
